

Trend Micro™

Client/Server/Messaging Suite

Multilayered security for mail servers, file servers, and clients

Protect your mail servers, file servers, desktops, and laptops with a single, integrated solution. **Trend Micro™ Client/Server/Messaging Suite** provides a multilayered defense against viruses, spyware, spam, phishing, inappropriate content, and blended threats. It also protects against web-based malware, data theft, and lost revenue. The suite can be remotely configured and managed for maximum IT efficiency.

CLIENT/SERVER/MESSAGING SUITE COMPONENTS

OfficeScan™ Client/Server Edition protects your desktops, laptops, and file servers with comprehensive security against today's complex, blended threats and web-based attacks. In-the-cloud Web Reputation protects your clients—on and off the network—by blocking access to and from malicious sites. OfficeScan also delivers improved virus and spyware protection, anti-rootkit security, variant detection, malware and remnant removal, plus firewall security. The plug-in architecture delivers superior ease of management.

ServerProtect™ prevents viruses from spreading through the network by blocking them before they reach end users. It provides real-time, high performance protection for file servers, preventing them from spreading viruses, spyware, and other web threats to internal or external endpoints. Client/Server/Messaging Suite includes ServerProtect for Microsoft™ Windows™/Novell™ Network and ServerProtect for Linux™ to deliver cross-platform protection for heterogeneous networks.

ScanMail™ Suite stops viruses, spyware, spam, phishing, and inappropriate content at the mail server—the only central point for inspecting internal mail. ScanMail Suite for Microsoft™ Exchange delivers superior mail server security with new protections against blended threats, zero-day attacks, and spam containing malicious URLs. Tighter integration with the latest Microsoft platform and management tools helps streamline administration—delivering the industry's lowest total cost of ownership.

Trend Micro Control Manager™ gives you greater control and more threat intelligence to optimize security throughout your business. This centralized security management console streamlines management and improves security for Trend Micro solutions with role-based administration, plus automated updates, alerts, and threat response. Unlike other solutions, Control Manager does not require additional client software.

SOFTWARE

Protection Points

- In the cloud
- Mail servers
- File servers
- Clients

Threat Protection

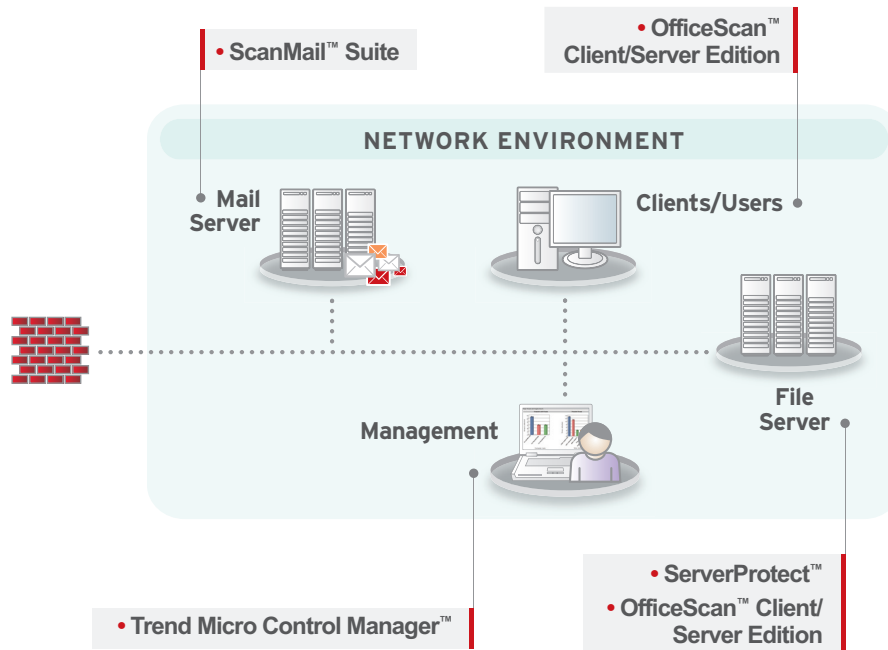

- Inappropriate content
- Spam and phishing
- Spyware and rootkits
- Viruses and Trojans
- Web threats
