

InterScan™ Messaging Security Suite

Integrated email threat protection at the Internet messaging gateway

Companies are experiencing a dramatic increase in email-based attacks on their messaging infrastructure and network resources. Spam, spyware, phishing, botnets, zombies, targeted email attacks, and blended-threat attacks not only sap employee productivity, they endanger company networks. These threats can also expose organisations to data loss, compliance, and legal risks. To combat these wide-ranging, email threats, organisations need a comprehensive messaging security solution that stops threats at the gateway before they penetrate the network.

Trend Micro InterScan™ Messaging Security Suite is a gateway email security software solution that integrates multi-tiered anti-spam and anti-phishing with award-winning antivirus and anti-spyware. This comprehensive email protection also provides content filtering to support compliance and to help prevent data loss. With a highly scalable platform and centralised management for easy administration, the solution is optimised to block the full range of standalone, blended-threat, and customer-specific attacks at the gateway.

- Content Filtering**

BENEFITS	FEATURES
Award-Winning Antivirus Security	<ul style="list-style-type: none"> • Award-winning technology and TrendLabs provide 24x7 protection • Zero-day protection through IntelliTrap technology blocks unknown and targeted virus attacks • ActiveAction antivirus technology automates recommended virus responses • Anti-spyware stops targeted spyware attacks sent through email
Flexible Content Filtering	<ul style="list-style-type: none"> • Inbound and outbound content filters scan emails and attachments • Filters identify content by attachment characteristics, keywords, lexicons, and customised data rules • Policies target senders or recipients by company, group, or individual • Policy actions provide flexible remediation options including company-specific legal disclaimers • Content filtering supports regulatory compliance, aids corporate governance, and prevents data loss
Multi-Tiered Spam and Phishing Defense (Advanced only)	<ul style="list-style-type: none"> • Three distinct tiers of anti-spam protection include Email Reputation Services, IP Profiler, and the anti-spam composite engine • Email Reputation Services block spam before reaching the gateway using the world's largest, most trusted reputation database while dynamic reputation services stop zombies and botnets as they first emerge • IP Profiler applies automatic, customer-specific reputation services, stopping spam and viruses, and creates a firewall against DHA and bounced mail attacks • Anti-spam composite engine combines multiple protective techniques including patent-pending image spam technology and embedded URL reputation • Anti-phishing leverages signatures, heuristics, and reputation services to stop phishing, including corporate spear-phishing attacks
Easy Management	<ul style="list-style-type: none"> • Comprehensive software solution is offered on leading operating systems and customises to fit your organisation's infrastructure • High scalability allows multiple servers while a single Web-based management console centralises policy, quarantine, archive, logging, and reporting • LDAP integration, delegated administration, and message tracking simplify administration • Web-based End-User Quarantine and quarantine notifications enable end users to manage their own spam

InterScan™ Messaging Security Suite

INNOVATOR OF GATEWAY SECURITY

Trend Micro pioneered antivirus gateway security and continues to be the industry leader, now integrating antivirus with other threat protection. Trend Micro's gateway security is powered by TrendLabs, a global network of research centers that ensures constant threat surveillance and attack prevention. With accurate, real-time data, TrendLabs delivers effective, timely security measures designed to detect, pre-empt, and eliminate attacks.

PROTECTION		Standard	Advanced
Antivirus	Blocks malware, including zero-day and spyware attacks	✓	✓
Content filtering	Supports regulatory compliance and corporate governance as well as prevents loss of confidential information	✓	✓
Email Reputation Services	Stop threats before the gateway with global and dynamic reputation services		✓
IP Profiler	Applies customer-specific reputation services and a firewall against DHA and bounced mail attacks		✓
Anti-spam composite engine	Uses multiple techniques to block spam and phishing		✓

SYSTEM REQUIREMENTS

Microsoft™ Windows™, Linux™, & Sun™ Solaris™

- 1G RAM of memory
- 500MB of disk space for installation
- Additional disk space needed for mail storage and database
- Microsoft Internet Explorer 6 SP1 or Firefox 1.5 (Netscape Navigator is not supported)
- LDAP Server Microsoft Active Directory 2000 or 2003, IBM Lotus Domino 6.0 or above, or Sun One LDAP

Microsoft Windows

- Windows Server 2000 with SP 4.0 or above
- Windows Server 2003 with SP 1.0 or above
- Intel™ Pentium™ IV or compatible 2.8GHz or higher
- Microsoft Desktop Engine or Microsoft SQL Server 2000 or above

Linux

- Red Hat™ Enterprise Linux 3 or 4
- SuSE™ Linux Enterprise Server 8.0 or 9.0
- Intel Pentium IV 2.4GHz
- 2GB swap space
- PostgreSQL version 8.1.3
- Bind server 9.0 or above
- MTA Postfix 2.1 or above; Sendmail; Qmail

Sun Solaris

- Sun Solaris 8, 9, or 10
- UltraSPARC™ II processor 650 MHz
- 2GB swap space
- PostgreSQL version 8.1.3
- Bind server 9.0 or above
- MTA Postfix 2.1 or above; Sendmail; Qmail
