

Trend Micro™ InterScan VirusWall™ 6

All-in-one software security solution that blocks viruses, spyware, spam and other threats at the Internet gateway

Viruses, spyware, spam, and inappropriate content can disrupt business operations, and impact employee productivity. These threats enter the company hidden inside email or Web pages, consuming system and network resources and driving up support costs. In addition, phishing attacks use fraudulent email for identity theft, while some spyware steals financial or other confidential information.

InterScan VirusWall is the most comprehensive Internet gateway software security solution available. Backed by the innovator and leader in gateway antivirus, Trend Micro, this solution saves time and money by reducing support calls and increasing the productivity of employees and preserving the availability of network resources.

Stops Damage from Widest Range of Threats

InterScan VirusWall blocks viruses, spyware, spam, phishing, botnets, and inappropriate content. It also provides URL filtering at the Internet gateway, before threats can impact your network. Time and resources are saved by stopping threats and blocking inappropriate and spyware-related Web sites. Also, a single Web-based console makes it easy to manage and track automatic protection from multiple threats.

Protects Early and Effectively

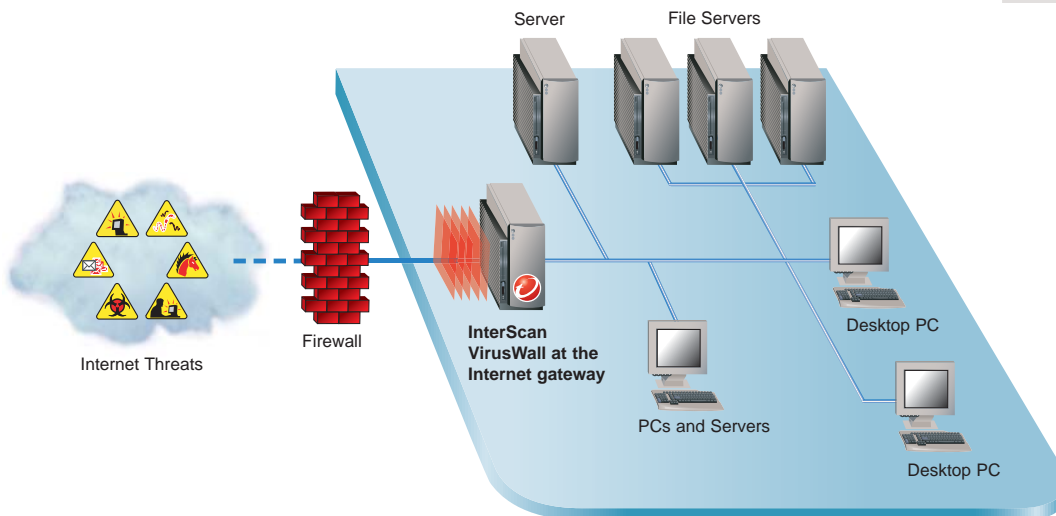

Prevent outbreaks early—even before detection signatures are available—with included Trend Micro Outbreak Prevention Services. In addition, Intellitrap technology stops previously unknown threats with its cutting-edge heuristic threat detection capabilities.

KEY BENEFITS

- **Improves protection:** Integrated gateway security blocks multiple threats including: viruses, spyware, spam, phishing, botnets, and inappropriate content
- **Simplifies administration:** One Web-based console for set-and-forget management
- **Improves productivity:** Reduces spam and provides flexible policies for Web use
- **Stops outbreaks early:** Prevents spread of malware before threat signatures are available

“InterScan VirusWall™ 6 is an effective solution for scanning both incoming and outgoing email. The POP3 scanning of Web-based mail and Outbreak Defense are useful capabilities and add protection over and above that offered by many other vendors.”

—Systems Engineer
Bell Security Solutions Inc.

InterScan VirusWall blocks viruses, spyware, spam, phishing, and botnet attacks before they can enter your network. This gateway security solution blocks inappropriate Web content and filters harmful URLs, improving employee productivity and preserving network performance.

Trend Micro™ InterScan™ VirusWall

All-in-one Gateway Security

- Helps prevent viruses, spyware, spam, phishing and botnet attacks from entering your network through vulnerable Internet gateway access points
- Reduces unwanted e-mail using a combination of signatures and heuristics to provide higher detection rates and fewer false positives
- **NEW:** Multi-level spyware, grayware and phishing protection blocks harmful Web and email downloads, preserves privacy and prevents company or personal confidential information from being stolen or inadvertently revealed
- **NEW:** Anti-bot capability defends PCs from being used as zombies to spread malware
- Scans unprotected protocols—including SMTP, HTTP, FTP and POP3—that are exploited by attackers to carry malicious payloads

Easy to Manage and Deploy

- Multi-threat protection is easy to deploy and manage from a single Web-based remote console
- Complements existing firewall and VPN solutions by providing an essential layer of front-line gateway defense

Effective, Early Protection

- Protects without intervention, resulting in reliable, timely responses and fewer infections
- Stops viruses earlier—before specific detection signatures are available:
 - IntelliTrap advances heuristic detection capabilities by blocking malicious code
 - **NEW:** Outbreak Prevention Services defends networks with rapid, automated responses when new outbreaks occur

System Requirements

Recommended System Requirements:

- **CPU**
 - Intel Pentium™ 4 3.0GHz HyperThread or above, 2 CPU or 4 CPU for better performance
- **Memory**
 - 1GB RAM or above
- **Hard Disk**
 - Available hard disk space 20 GB
- **Operating System**
 - Microsoft™ Windows™ 2003 Server series, SP1
 - Microsoft™ Windows 2000 Server series, SP4
 - Microsoft™ Windows SBS 2003, SP1
- **Internet Browser**
 - Microsoft™ Internet Explorer™ 5.5 or above
 - Firefox™ 1.5
 - Netscape™ 8.0
 - Mozilla™ 1.7
